

# TimeLox Access.

**Wire-free electronic locks that replace traditional mechanical locks and keys.**

In comparison with a traditional mechanical lock, the TL Access enhances the security in three important ways:

### 1. TL Access can easily create new accesses.

With TL Access you can program directly in the door unit which user card that should be granted access to the door. You can set each lock in 3 different modes:

1. Access for selected card users.
2. Stand open position.
3. Temporary blocking of all users.

### 2. TL Access remembers who opened the door.

If something happens, you can easily read out what user card that opened the door and at what time.

### 3. TL Access can cancel unwanted access directly.

With TL Access you can easily select the accesses you want to make invalid. These could be cards lost by staff or retained by ex-employees for instance.

### The TL Access easy installation philosophy also means low costs.

TL Access just takes a couple of minutes to install. It's developed for use together with the existing lock case. It's also easy to move - just release a few screws.

### TL Access is suitable for common rooms:

With the features *Stand-Open* and *Temporary blocking of all users*, TL Access is specially useful for rooms like changing-rooms, club facilities, meeting rooms, store rooms, conference rooms and lecture halls.

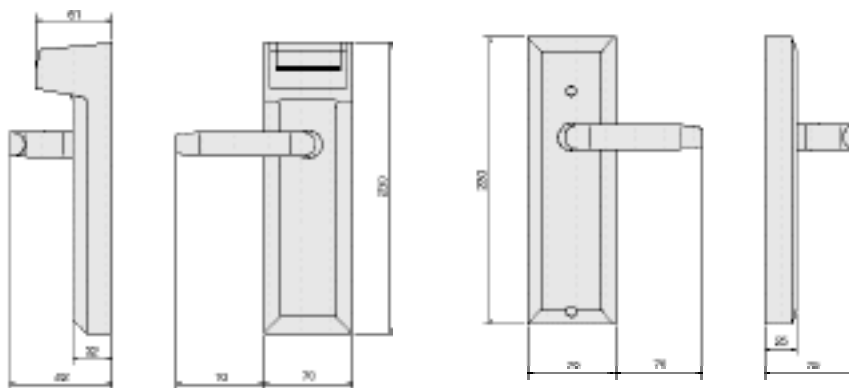

*Access-kit ready for installation.*

## Major features

- Easy to operate and use.
- Wire-free – requires no wires or PC.
- Long life 9 Volt alkaline battery.
- Quick and simple to install
- Additional cards inexpensive.
- Audit trail of the latest 100 entries.
- Up to 250 users with individual cards.
- Lost cards individually cancelled.
- Adaptable to most lock cases.
- No extra cut-out needed – no damage to doors.

## Access / technical data

TimeLox Access is a simple one-door access control product for areas where access is to be restricted to authorized card holders only. It is a battery-operated stand alone unit, requiring no cabling or wiring.

### FUNCTIONS

Uses high coercivity CR80 magstripe cards, with an encrypted code on track 3. Capacity 250 cards.

The unit is programmed at the door, without needing to remove it from the door.

TimeLox Access can be set in three modes:

- Stand-open mode allowing all persons free passage.
- Normal mode, where users must insert a valid card to gain access.
- Blocked mode, where no access is permitted.

A log of the latest 100 valid entries is kept. This can be downloaded to a PC by using an optional Service Unit.

All products within the TimeLox range are CE approved.

### ENVIRONMENTAL REQUIREMENTS

For interior use only.

Temperature range +5°C to +50°C.

Relative humidity 10% to 90% (non-condensing).

### BATTERY OPERATION

Uses one 9 Volt alkaline battery.

50,000 accesses or 2-3 years. Battery-low indication.

### FORMAT OF SUPPLY

TimeLox Access is supplied as a complete package with mounting details for doors 30 - 85 mm, one 9 Volt alkaline battery, mounting instructions, programming manual, programming cards and ten user card-sets.

Lock cases and additional user cards can be ordered separately.

### RECOMMENDED LOCK CASES

TimeLox Access may be used with any lock case with 8 mm squared handle spindle. Your locksmith has several options that are recommended as no additional door preparation is required.

### READ OUT OPTION

*As an option: The Service Unit. It gets the events from the door unit. The data can then be transferred to a PC, where it is easy to see what card-ID that opened what door and at what time. The Service Unit can also be used for power opening.*
