

TimeLox Office.

Wire-free electronic locks that replace traditional mechanical locks and keys.

In comparison with a traditional mechanical lock, the TL Office enhances the security in three important ways:

1. TL Office can easily create new accesses.

With TL Office you can program directly in the door unit which user card that should be granted access to the door. You can set each lock in different security modes. This will make it behave differently during a 24-hour period. For instance, all employees can have access daytime together with their card. But night time only a few have access, together with both card and personal code.

2. TL Office remembers who opened the door.

If something happens, you can easily read out what user card that opened the door and at what time.

3. TL Office can cancel unwanted access directly.

With TL Office you can easily select the accesses you want to make invalid. These could be cards lost by staff or retained by ex-employees for instance.

Office-Kit ready for installation.

The TL Office easy installation philosophy also means low costs.

TL Office just takes a couple of minutes to install. It's developed for use together with existing lock cases. It's also easy to move - just release a few screws.

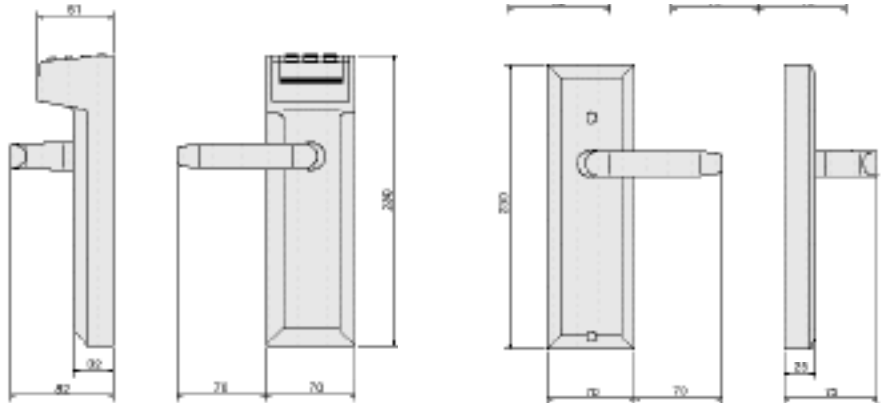

TL Office is made for a wide range of sites.

Shops, offices, companies (also selected divisions on large companies), stores, 24-hour shops, petrol stations, storage rooms, computer rooms, golf clubs and boat clubs.

Major features

- Easy to operate and use.
- 4-digit PIN-code for enhanced security.
- Wire-free – requires no wires or PC.
- Long life 9 Volt alkaline battery.
- Quick and simple to install.
- Track 2 option – can use existing credit cards, etc.
- Additional cards inexpensive.
- Audit trail of the latest 100 entries.
- Up to 500 users with individual cards and/or code.
- Lost cards individually cancelled.
- Adaptable to most lock cases.
- No extra cut-out needed – no damage to doors.

TimeLox Office is a flexible one-door access control product for areas where access is to be restricted to authorized card holders and those given a PIN code, or where greater security is required at certain times of the day. It is a battery-operated stand alone unit, requiring no cabling.

FUNCTIONS

Uses high coercivity CR80 magstripe cards, with an encrypted code on track 3. Capacity 500 cards and/or codes.

The unit is programmed at the door, without needing to remove it from the door.

TimeLox Office can be set in five modes:

- Stand-open mode allowing all persons free passage.
- Access by card.
- Access by personal code.
- Access by card plus personal code.
- Blocked mode, where no access is permitted.

A log of the latest 100 valid entries is kept. This can be downloaded to a PC by using an optional Service Unit. All products within the TimeLox range are CE approved.

ENVIRONMENTAL REQUIREMENTS

For interior use only.
Temperature range +5°C to +50°C.
Relative humidity 10% to 90% (non-condensing).

BATTERY OPERATION

Uses one 9 Volt alkaline battery.
50,000 accesses or 2-3 years. Battery-low indication.

FORMAT OF SUPPLY

TimeLox Office is supplied as a complete package with mounting details for doors 30 - 85 mm, one 9 Volt alkaline battery, mounting instructions, programming manual, programming cards and ten user card-sets.

Lock cases and additional user cards can be ordered separately.

RECOMMENDED LOCK CASES

TimeLox Office may be used with any lock case with 8 mm squared handle spindle. Your locksmith has several options that are recommended as no additional door preparation is required.

READ OUT OPTION

As an option: The Service Unit. It gets the events from the door unit. The data can then be transferred to a PC, where it is easy to see what card-ID that opened what door and at what time. The Service Unit can also be used for power opening.
